44TH AVE W INTERURBAN TRAIL PEDESTRIAN BRIDGE

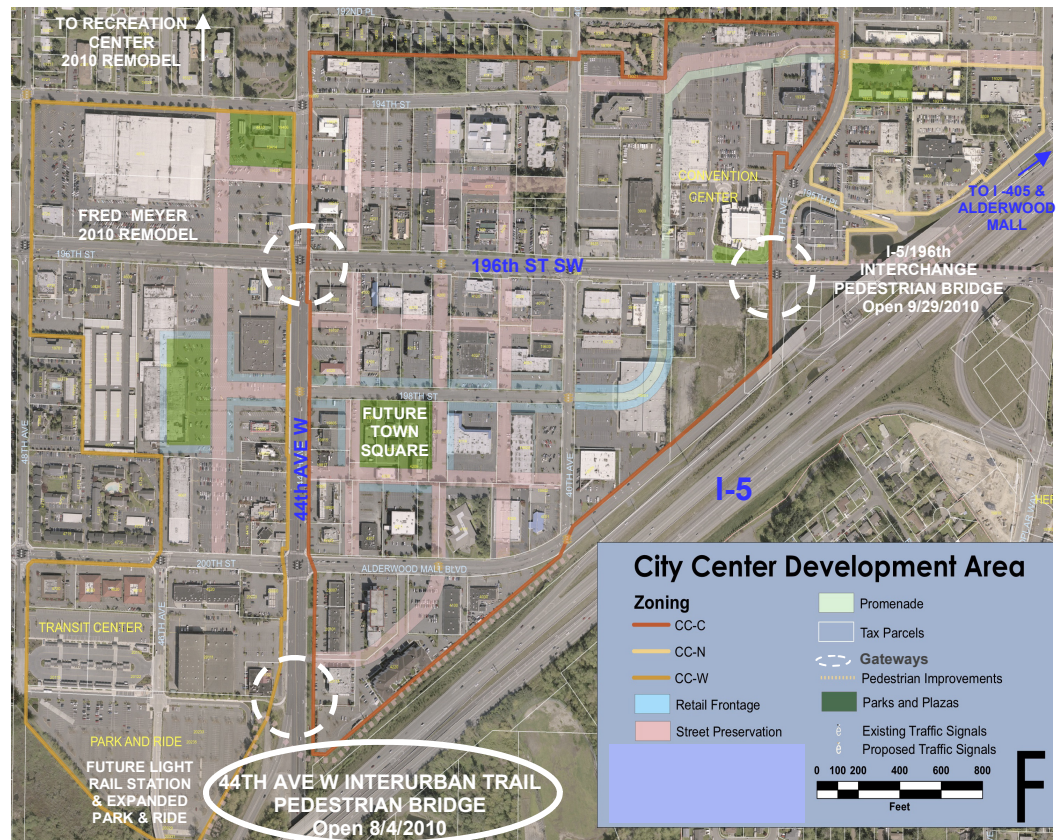

OPENED AUGUST 4, 2010

PROJECT Summary

Completed July 2010, this project provides the “missing link” in Lynnwood’s portion of the Interurban Trail, by constructing a bridge for pedestrians and bicycles over 44th Ave W (SR 524 spur), and developing approximately 1500’ of trail east of the bridge.

The new bridge parallels I-5, providing a grade-separated Class 1 trail over 44th Ave W and the southbound on-ramp to I-5. The western end of the bridge will join the existing trail near the newly expanded Sound Transit Regional Transit Center. A new section of the trail constructed east of the bridge joins the existing Interurban Trail at 40th Ave W.

The bridge provides a seamless non-motorized corridor that connects business and retail centers. The project provides long term improvements for safety and congestion, reduces potential bicycle/pedestrian/vehicle conflicts, contributes to transportation demand management, and addresses commute trip reduction supporting goals of the City Center Sub-Area Plan.
